1.Factory Introduction

Factory Name:

Dongguan Boyuan Eastar Technology Co., Ltd.

Detailed Address: No. 129, Dongfeng Road, Jiuxiang Village, Qingxi Town, Dongguan, Guangdong, China

Boyuan Injection Molding Factory

Boyuan is a specialized injection molding factory within our group's manufacturing system, with a particular focus on electronic integration, functional development, and complex injection-molded toys. The factory produces a wide range of customized products, including light and sound toys, electronic-integrated figures, collectible toys, hanging accessories, designer toys, and other functional plastic products.

With integrated capabilities covering 3D development, mold engineering, precision injection molding, electronic integration, surface finishing, assembly, and quality inspection, Boyuan is well suited for projects that combine injection molding with lighting, sound, movement, electronic functions, or other interactive features.

Core Manufacturing Strengths

Boyuan's key strength lies in combining injection molding with electronic and functional integration. Our 3D design and engineering teams work closely with production teams to develop and manufacture products with complex structures, internal components, electronic assemblies, and functional requirements.

The manufacturing process covers mold development, precision injection molding, electronic assembly, surface finishing, final assembly, and quality control. This integrated approach enables closer control over product quality, production efficiency, and delivery throughout the development and mass production process.

2.Factory Introduction

Factory Name:

Meihui Plastic Electronic Technology Co., Ltd.

Detailed Address: 1st Floor, Building A, No. 139 Yuquan Road, Huangdong Village, Fenggang Town, Dongguan, Guangdong, China

Meihui Injection Molding Factory

Meihui is a specialized injection molding factory within our group's manufacturing system, with a particular focus on complex color applications, detailed surface finishing, and appearance-driven injection-molded products.

The factory produces customized injection-molded toys, collectible figures, character products, designer toys, accessories, and other plastic products where accurate color reproduction, multi-color combinations, and detailed visual effects are important.

Core Manufacturing Strengths

Meihui's key strength lies in the manufacturing of injection-molded products with complex color schemes and demanding visual requirements. Our engineering and production teams work closely to manage color separation, material selection, molding parameters, painting, printing, assembly, and other finishing processes.

This integrated manufacturing approach allows us to handle products with multiple colors, detailed color transitions, layered visual effects, and demanding appearance specifications while maintaining consistency across mass production.

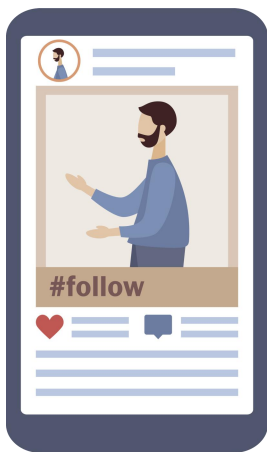

From 3D development and mold engineering to injection molding, surface finishing, assembly, and quality inspection, Meihui provides an integrated manufacturing process designed to maintain stable product appearance and production quality.

International Media Coverage

Our manufacturing business and team have also received international media attention. We were honored to receive an interview invitation by email from BBC World Service – Business Daily, providing an opportunity to introduce our manufacturing business, team, and products exported to international markets to a global audience.

Our Certifications

The factory has established a quality management system aligned with ISO 9001 requirements and follows international social compliance standards such as amfori BSCI. The factory also has experience with Disney FAMA (Facility and Merchandise Authorization) and can support the compliance and factory audit requirements of international clients. Through long-term cooperation with international brands and demanding commercial projects, the factory has developed extensive practical experience in engineering development, electronic integration, product manufacturing, quality control, and project delivery.

The Relationship Between Boyuan & Meihui and MIHOX

When you first visit our website, you may naturally wonder: Why do we present several different factories on our website, and how are these factories related to MIHOX?

The answer is simple: the factories featured on our website, including Boyuan and Meihui, are all part of our group's own manufacturing system. They are not outsourced or third-party factories. Each facility has its own production site, engineering team, equipment, and specialized manufacturing capabilities.

MIHOX is the international brand and market development platform we are building for our group. At this stage, MIHOX focuses on helping our own manufacturing facilities expand into international markets through global marketing, client communication, project coordination, and factory promotion.

For international B2B clients, this means that working with MIHOX provides direct access to our actual manufacturing facilities and production capabilities.

We understand that trust is especially important when working with a manufacturing partner overseas. For clients who are able to visit China, we welcome and support on-site factory visits, allowing you to see the production environment, equipment, engineering teams, and manufacturing processes firsthand.

If an in-person visit is not convenient, we can also arrange online factory tours and live video meetings, so you can communicate directly with our teams and see our manufacturing facilities remotely.

Whether online or in person, we believe that seeing the real factory is the first step toward building trust and a long-term B2B partnership.

The background image shows a modern, multi-story building with large windows and a curved facade. The building is partially obscured by a semi-transparent blue overlay that covers the upper two-thirds of the image. In the foreground, there is a paved area, possibly a driveway or parking lot, with some greenery and a small tree on the left. The overall scene is bright and clear.

Factory Office

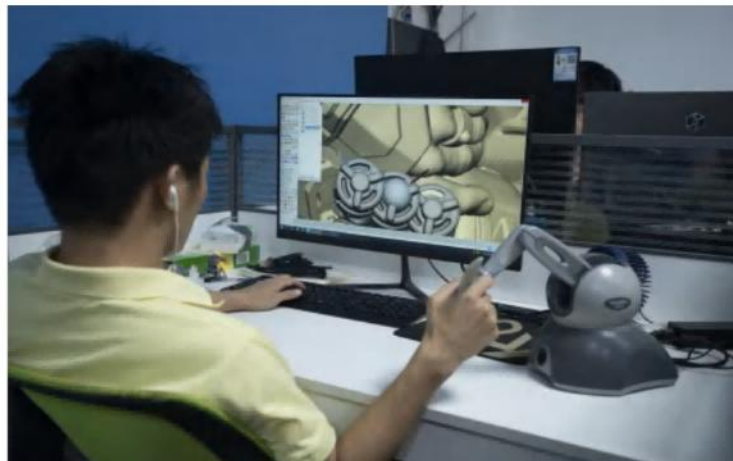

Sample Room

Since our products are developed and manufactured using dedicated steel molds, these molds represent long-term investments by our clients. Many projects are also protected by confidentiality agreements and therefore cannot be publicly displayed online.

For a more comprehensive view of our products and manufacturing capabilities, we welcome clients to visit our factory in person.
